

# Integration

## SOLUTIONS

- Accounting
- Human Resources
- Building Management Systems (BMS)
- Maintenance Management Systems (MMS)
- Data Exchange and Management
- GIS/Mapping
- Multi-System Reports

## BENEFITS

- Systems Seamlessly Share Information
- Maximum Re-use of Existing Infrastructure
- Eliminates Redundant Data Entry
- Increases Data Accuracy
- Enterprise Wide Reporting

*"TeamWORKS is a package that encompasses all of the aspects that we need to maintain our Facilities Organization, including the support which is exceptional."*

Randall Johnson

Assistant Director, Physical Plant  
Campbell University

## BRIDGE INTEGRATION IS A COMPREHENSIVE SYSTEMS INTEGRATION THAT ENSURES OPERATIONAL SUCCESS AMONG DIVERSE SYSTEMS AND DEVICES.

TeamWORKS Bridge Integration Solutions (BIS) is a comprehensive systems integration service that bridges the gap between diverse existing systems allowing data exchange and reporting in spite of differing technologies. Bridge Integration enable various groups within an organization to utilize their applications of choice while contributing to the entire organization's collection of data and information.

**CASE STUDY**—Campbell University is a premier private university recognized as one of the most progressive for education and research in the Southeast. Founded in 1887, Campbell University's main campus is located in Buies Creek, North Carolina with a main campus enrollment of over 3,900 students.

This includes over 2,500 undergraduate students and over 1,400 graduate students.

**The Challenge** - Campbell University's Physical Plant is required to submit a report to their Finance office showing the maintenance costs to each department for work completed in shared spaces. Campbell's Physical Plant utilizes TeamWORKS' Computerized Maintenance Management Software (CMMS) and Campbell's Finance office uses a different system. TeamWORKS needed to integrate a solution that would automate the report and bridge the gap between to two systems which presented three challenges.

1. Create a solution to reduce the number of man hours spent producing the report .
2. Increase the accuracy of the report.
3. Provide the report in a format specified by the financial software application.

**The Solution** —TeamWORKS created a utility to automate the report which spreads labor and inventory costs between departments for work done in shared spaces. The report is generated from the CMMS in a specific format that integrates with the financial software application increasing accuracy and dramatically reducing the number of hours spent generating the report. Campbell University was so please with the success of their bridge integration that they have employed TeamWORKS for future enhancements to their systems.

### TeamWORKS' Bridge Integration Approach

Build and deploy smart, simple and flexible solutions that meet our customer's needs.

Listen and understand our customer's business allowing us to help them plan their integration solution that will support their business now and in the future.

Integrate new solutions that will extend, enhance and reuse existing systems taking into consideration our customer's budget and investments.
